Bur. Ent. & P. Q. Issued August 1936

United States Department of Agriculture

BUREAU OF ENTOMOLOGY AND PLANT QUARANTINE

SERVICE AND REGULATORY ANNOUNCEMENTS

LIST OF INTERCEPTED PLANT PESTS, 1935

(List of Pests Recorded During the Period July 1, 1934, to June 30, 1935, Inclusive, as Intercepted in, on, or with Plants and Plant Products Entering United States Territory)

INTRODUCTION

This is the forty-first paper of a series issued under various names at more or less irregular intervals listing intercepted plant pests. The present list covers the twenty-second year of the period since the lists were started and includes intercepted plant pests for which determinations were received and indexed during the period specified. The sources from which the data were derived and the manner of preparation are discussed in previous lists.

Most of the insect determinations were made by specialists of the Bureau and many of the plant-disease and host determinations by specialists of the Bureau of Plant Industry. The States of California and Florida and the Territory of Hawaii maintain their own staffs of specialists and make many of their own determinations. Frequently the intercepted material is in a stage that is not determinable or is too badly damaged or is inadequate for determination. Many times the only organisms recognized are innocuous. Such interceptions, numbering some thousands, are omitted from the list.

As pointed out in previous lists of interceptions, statement as to the origin of fruits and vegetables carried as ships' stores, as well as of plants used for decorative purposes and of plant material carried by passengers, cannot always be verified, but every effort is made to give the origin of such plants and plant products as accurately as possible.

FRUIT FLIES

The following fruit flies were intercepted: Celery fly (*Acidia heraclei*) in celery from Italy;[1] West Indian fruit fly (*Anastrepha acidusa*) in mango from Puerto Rico; Mexican fruit fly (*A. ludens*) in grapefruit, mango, orange, and sour orange from Mexico; *A. obliqua* (adult) with banana debris from Panama; dark fruit fly (*A. serpentina*) in mamey and sapote from Mexico; Central American fruit fly (*A. striata*) in guava and in a bag with figs, guavas, peaches, and sweet limes from Mexico; *Anastrepha* sp. in orange and pumpkin from Brazil, mango from Cuba, Dominica, and Haiti, sapote from Guatemala, mango and star-apple from Honduras, guava and mango from Jamaica, avocado. *Crataegus mexicana*, grapefruit, guava, mamey, mango, orange, pear, and sapote from Mexico, in mango and (adults) with bananas and banana debris from Panama, in cherimoya, guava, mango, star-apple, and (pupae) in packing with mangoes from Puerto Rico, and in grapefruit, mango, and orange from Trinidad; melon fly (*Bactrocera cucurbitae*) in tomato from Hawaii; Mediterranean fruit fly (*Ceratitis capitata*) in tangerine from Algeria, apple, guava, loquat, orange, sorbe, and tangerine from the Azores, orange from Brazil, tangerine from France, apple, pricklypear, and quince from Greece, avocado, coffee, longan, mango, and star-apple from Hawaii, apple, grape. orange, peach, pear, persimmon, pricklypear, quince, tangerine, and (pupa and puparia) in a box of dried figs and nuts from Italy, grapefruit, orange, and (puparia) on packing around grapefruit from Palestine, apple, loquat, orange, quince, and *Sorbus* sp. from Portugal, apricot, grape, lemon, orange, and peach from Spain, and (adult) with sugarcane from Trinidad; olive fruit fly (*Dacus oleae*) in olives from Greece and Italy; apple maggot (*Rhagoletis pomonella*) in *Crataegus mexicana* from Mexico; *R. suavis* in black walnut from Mexico; *Rhagoletis* sp. in cherry from Bermuda, cherry and sour

[1] For details of interceptions mentioned in the text see lists under the countries named.

cherry from Italy, apple, *Crataegus mexicana*, *Crataegus* sp., and black walnut from Mexico, and sour cherry from Yugoslavia; *Tephritis* sp. (adult) with Paraguay tea from Argentina; papaya fruit fly (*Toxotrypana curvicauda*) in papaya from the Bahamas, Canal Zone, and Panama; *Trypanea* sp. (adults) with *Inula* sp. from Germany; and a trypetid in *Lonicera nitida* (seed and pulp) from Bulgaria, pepper from Italy, pear, plum, and poinsettia (seed) from Mexico, (pupae) in *Adansonia* sp. (seed) from the Union of South Africa, (pupa) with *Amygdalus* sp., (pupa) in *Juniperus foetidissima*, (pupa) with *Lonicera* sp., and (pupae and adult) with *Rosa* sp. from the Union of Soviet Socialist Republics, and (pupae) with *Lycoseris* sp. from Venezuela.

MISCELLANEOUS INSECTS

The potato weevil (*Epicaerus cognatus*) was intercepted in potatoes (*Solanum tuberosum*) from Mexico. An orchid from the Philippines was infested with *Tadius erirhinoides* (Curculionidae). *Capitophorus formosanus* (aphid) arrived with chrysanthemum from Japan. The Asiatic rice borer (*Chilo simplex*) was found in rice straw packing from China, Spain, and Syria, *Miscanthus japonica* and rice straw from Japan, and wheat straw from France. A kumquat leaf from Japan was infested with the citrus leaf miner (*Phyllocnistis citrella*). Apricot scions from Tripoli were infested with *Lepidosaphes halli* (Coccidae). The durra stem borer (*Sesamia cretica*) was taken in broomcorn from Italy. *Acrolepia assectella* (Plutellidae) was intercepted in leaves of leeks from Belgium, Denmark, France, Italy, and Netherlands, mint from Belgium, and onion from Germany.

The pink bollworm (*Pectinophora gossypiella*) was intercepted in cottonseed and cotton samples from Brazil, cottonseed, cotton bolls, and cottonseed on cottonseed-cake bags from China, cottonseed, cotton waste used as packing, and cottonseed on bagging from Egypt, unginned seed cotton from Greece, cottonseed, seed cotton, cotton boll, and cotton used as packing from Mexico, cottonseed from the Netherlands, cottonseed and (pupa) with cotton fiber from Puerto Rico, and (larvae and pupa) with herbarium specimens of cotton from the West Indies. The citrus blackfly (*Aleurocanthus woglumi*) was taken on leaves of grapefruit and orange from the Bahamas, lime from Cuba, and orange from Jamaica. *Laspeyresia splendana* (Olethreutidae) arrived with chestnuts from France, Germany, Italy, Japan, Portugal, Spain, and Switzerland. Mahogany logs from the Philippines and wooden packing cases from India and the Philippines were infested with *Heterobostrychus aequalis* (Bostrichidae). *Phyllotreta cruciferae* (Chrysomelidae) was intercepted in cabbage from England and leek from France. The yam weevil (*Palaeopus costicollis*) was taken in yams from Jamaica and Nigeria. *Apion carduorum* (Curculionidae) infested globe artichoke from France. *Bruchophagus gibbus* (Eurytomidae) arrived with alfalfa from China and Manchuria, *Medicago falcata* from Rumania, alfalfa and clover from Turkey, and alfalfa, *Lotus* sp., *Medicago falcata*, and *Trigonella* sp. from the Union of Soviet Socialist Republics.

Collabismodes cubae (Curculionidae) arrived in pepper from Cuba. *Platyedra vilella* (Gelechiidae) was intercepted in seed of *Althaea nudiflora* from the Union of Soviet Socialist Republics. Witloof or chicory from Belgium was infested with *Agromyza pinguis* (Agromyzidae). *Baris laticollis* was intercepted in turnip from France. *Gryllus assimilis argentinus* (Gryllidae) arrived with grapes and melon from Argentina. The bean pod borer (*Maruca testulalis*) arrived in lima beans from Cuba and string beans from Hawaii, Mexico, and Puerto Rico. Licorice seed pods from Greece were infested with *Bruchidius halodendri* (Bruchidae). *Hylesinus fraxini* (Scolytidae) arrived in ash used for crating from England. *Conotrachelus aguacatae* was intercepted in avocado from Mexico. *Euspermophagus gossypii* (Bruchidae) arrived with morning-glory (*Ipomoea albivenia*) seed from Mozambique.

A nest containing immature larvae of the brown-tail moth (*Nygmia phaeorrhoea*) was intercepted on a pear tree from Italy. *Taeniothrips ericae* (thrips) arrived on heather from England, Germany, Great Britain, Ireland, and Scotland. *Scolytus multistriatus* and *S. scolytus* (Scolytidae) infested elm logs from France. *Chlorophorus annularis* (Cerambycidae) was taken in bamboo poles from Japan. *Nysius huttoni* (Lygaeidae) was intercepted on apples from New Zealand. Cipollini from Morocco were infested with *Exosoma lusitanica* (Chrysomelidae). The coffee berry borer (*Stephanoderes hampei*) was intercepted in coffee from Tanganyika and Uganda. The tomato pinworm (*Gnorimoschema lycopersicella*) was taken in tomatoes from Cuba, Hawaii, and Mexico. *Psylliodes chrysocephala* (Chrysomelidae) was intercepted in turnips from Algeria, Argentina, England, and France, radishes from Denmark and Italy, and carrot from Italy.

MISCELLANEOUS PLANT DISEASES

An unusual number of pathogens new to our interception files were added during the year, several undescribed species were intercepted, other organisms were found on material from additional countries, and interceptions of important diseases such as citrus canker continued. For convenience some of the more important and interesting interceptions are briefly noted in alphabetical groups, fungi and bacteria determined to species in the first group, nemas in the second group, and new or apparently new species of fungi and nemas in a third group.

Arthrobotrys superba on *Ficus* sp. from Barbados; *Ascochyta heterophragmia* on *Camellia japonica* from France; *Bacterium citri* on *Citrus* spp. from China, India, and Japan; *Bacterium pisi* on peas from Mexico; *Botrytis allii* on onions from Japan; *Ceratostomella* (*Graphium*) *ulmi* on elm logs from France; *Cercospora destructiva* on *Euonymus japonica variegata* from Japan; *C. handelii* on azalea from Belgium; *C. neriella* on oleander from Bermuda; *C. odontoglossi* on *Odontoglossum* sp. from England; *Cerotelium desmium* on cotton leaf from Martinique; *Colletotrichum omnivorum* on aspidistra from Germany; *C. peregrinum* on *Fatsia japonica* from Japan; *C. truncatum* on lima beans from Cuba; *Dematium pullulans* on plum from Chile; *Diplodinia salicis* on willow from Union of Soviet Socialist Republics; *Discosia artocreas* on peony from Japan; *Discella carbonacea* on pussy willow from Germany; *Elsinoe phaseoli* on lima beans from Cuba and Puerto Rico; *Gloeosporium catechu* on betel palm from the Philippines; *G. elasticae* on *Ficus religiosa* from Mexico; *G. pelargonii* on geranium from Puerto Rico; *G. piperatum* on peppers from Java; *G. polymorphum* on dracaena from Japan; *G. rhododendri* on rhododendron from England; *Glomerella cincta* on orchid from Jamaica or Colombia; *Godronia cassandrae* on lingon berries from Newfoundland; *Helminthosporium allii* on garlic from Chile, France, Italy, and Mexico; *H. oryzae* on rice from the Orient; *H. ravenelii* on smut grass from Mexico; *H. sativum* on wheat straw packing from England and Japan; *Leptosphaeria circinans* on *Medicago* sp. from Turkey; *L. heterospora* on iris from Germany, France, Netherlands, and Turkey; *Leptothyrium macrothecium* on peony from Japan; *Microdiplodia wistariae* on wisteria from Japan; *Monochaetia paeoniae* on peony from Japan; *Mycosphaerella brassicicola* on cauliflower from Belgium, England, France, and Germany, on broccoli from Brazil, and on cabbage from England; *M. moutan* on peony from China and Japan; *M. musae* on banana leaf from Puerto Rico; *Nigrospora oryzae* on rice from French Morocco; *Ophiobolus graminis* on wheat from France; *Papulospora parasitica* on tulip bulbs from Netherlands; *Phoenicostroma chamaedoreae* on palm leaves from Mexico; *Phoma camelliae* on camellias from Japan; *P. rostrupii* on carrot from England and France; *Phyllosticta betae* on chard from Italy; *P. cynarae* on globe artichokes from France; *P. divergens* on *Albizzia* seed pod from British West Indies; *P. globuli* on eucalyptus from Australia; *P. rabiei* on *Cicer* from Union of Soviet Socialist Republics; *Polythrincium trifolii* on clover from Turkey; *Puccinia allii* on garlic from Brazil and Egypt and on leek from France; *Pyrenophora ciliolata* on primrose from England; *Ramularia destructiva* on sweet gale from Scotland; *Scirrhia bambusae* on bamboo from Italy; *Sclerotium oryzae* in rice straw from Spain; *Septoria azaleae* on azaleas from Belgium; *S. castaneae* on chestnut from Italy; *S. citri* on lemons from Egypt, India, Italy, and Spain; *S. insularis* on ivy from England; *S. nigerrima* on pear from Italy; *Sporonema camelliae* on camellia from France; *Termitaria* n. sp. on *Reticulitermes speratus* Kolbe on an unidentified plant from Japan; *Thecopsora padi* on spruce from Norway; *Urocystis colchici* on colchicums from Netherlands; *U. tritici* on seed wheat from Australia; *Uromyces glycyrrhizae* on licorice from Greece; *Ustilaginoidea virens* on rice from the Philippines; *Vermicularia cacti* on cactus from Puerto Rico; and *V. capsici* on pepper from Java.

Interceptions of nematodes included *Acrobeles glaphyrus* on tuberose from Mexico (not a plant parasite and hence not included in the list); *Anguillulina agrostis* on *Festuca* sp. from Union of Soviet Socialist Republics; *A. dipsaci* on various hosts from Belgium, England, Finland, France, Germany, Ireland, Italy, Netherlands, Poland, Union of Soviet Socialist Republics, and Wales; *A. pratensis* from Argentina and Germany; *A. gallica* in elm from France; *Anguillulina* sp. on potato from Cuba; *Aphelenchoides fragariae* on strawberry from France; *A. parietinus* from Argentina, Australia, Bermuda, China, Denmark, England, Germany, Greece, Ireland, Japan, Netherlands, Sweden, and Union of South Africa; *A. hunti* in tiger lily from Japan and *Physalis* from Mexico; *A. solani* in potato from Cuba; *Aphelenchus avenae* from Australia, Bermuda, England, Germany, Italy, Japan, Mexico, Netherlands, and Peru; *Cephalobus cubaensis* in potato from Cuba; *Cephalobus* sp. (apparently new) in burdock from Japan;

Heterodera schachtii on beets from Mexico; *Hexamermis* (?) n. sp. (this genus parasitizes insects) in *Eugenia* sp. seed from the Canal Zone; *Hoplolaimus* n. sp. in yam from Nigeria; *Neotylenchus abulbosus* in *Tritonia* from Netherlands.

A number of organisms determined to genus only at the time of interception were of special interest because they were new species or belonged to genera not known to occur on their hosts or were unlike the species reported as occurring on the host or related plants. Among these were *Acrobeles glaphyrus* (n. sp.) on tuberose from Mexico (not a plant parasite and hence not included in the list); *Anguillulina gallica* (n. sp.) in elm from France; *Aphelenchoides hunti* (n. sp.) in tiger lily from Japan and *Physalis* from Mexico; *A. solani* (n. sp.) in potato from Cuba; *Apiospora* sp. on lemon grass from Jamaica; *Ascochyta* sp. on rhododendron from England; *Brachysporium* sp. on melons from Argentina; *Cephalobus cubaensis* (n. sp.) in potato from Cuba; *Cephalobus* sp. (apparently new) in burdock from Japan; *Gloeosporium* spp. on *Agapetes* from England, on *Aglaonema* from China, on areca nuts from the Philippines, on camellia and on *Daphne* from Japan; *Helminthosporium* sp. on tomatoes from Mexico; *Hendersonia* n. sp. on cactus from Mexico; *Hexamermis* (?) n. sp., insect host unknown, in *Eugenia* seed from the Canal Zone; *Leptosphaeria* sp. on wisteria from Japan; *Mycosphaerella* sp. (apparently new) on cactus from Mexico; *Pestalozzia* sp. on wisteria from Japan; *Phoma* sp. on lemon cutting from Italy; *Phomopsis* sp. on *Coelogyne* from Jamaica; *Phomopsis* sp. (probably new) on star-apple from Puerto Rico; *Phyllosticta* sp. on camellia from Japan; *Phymatotrichum* sp. on cabbage from Spain; *Physalospora* sp. on *Aglaonema* from China; *Septoria* sp. on *Acanthus* from the Dominican Republic; *Septoria* sp. on primrose from England; *Sphaeronema* spp. on carrot from England, on onion from Spain, and on narcissus from England and Netherlands; *Termitaria* n. sp. on termite from Japan; *Vermicularia* sp. on *Ophiopogon* from Turkey.

The interceptions of root-knot nematode (*Heterodera marioni*) are not shown in the main list but included the following new hosts: From Dominica, *Hedychium coronarium;* East Africa, *Stapelia* sp.; England, *Aconitum napellus roseus, Anemone hepatica, A. magellanica,* and *Thymus azoricus;* France, *Genista* sp., *Syringa sweginzowii,* and *Viburnum fragrans;* Germany, *Echinocactus lennin;* Japan, *Camellia japonica;* Netherlands, *Pyrethrum* sp.; Union of South Africa, *Euphorbia punctata, Haworthia blackbeardii* (?), and *Kalanchoe* sp.

AIRCRAFT INTERCEPTIONS

Two hundred and thirty-seven interceptions of insects were made. Among these were the following: Citrus blackfly (*Aleurocanthus woglumi*) on orange leaves from the Bahamas; *Anastrepha* sp. (Trypetidae) in sapote seed from Guatemala; *Bephrata cubensis* (Eurytomidae) in *Spondias dulcis* seed from Cuba; coffee leaf miner (*Leucoptera coffeella*) in coffee leaves from Puerto Rico; red-banded thrips (*Selenothrips rubrocinctus*) on guava fruit from Cuba; and *Vinsonia stellifera* on orchid from Panama.

Seven plant disease interceptions were made: *Cephaleuros virescens* (alga) on Cape-jasmine from Cuba (2) and on orchid from Costa Rica; *Colletotrichum gloesporioides* on tree seed from Haiti; *Penicillium digitatum* on orange and *P. italicum* on lime from Jamaica; and *Pestalozzia* sp. on star-apple from Cuba.

CORRECTION

Following is the correct spelling of *Epilachna borealis discincta* (Coccinellidae), appearing on pages 2 and 57 of the List of Intercepted Plant Pests, 1934. On pages 1 and 54 of the list for 1934 the host for the Mexican fruit fly (*Anastrepha ludens*) should be sweet lime (*Citrus limetta*) instead of lime (*Citrus aurantifolia*).

COMMON PESTS INTERCEPTED

In addition to the pests named in the itemized list which makes up the body of this report, there were numerous interceptions of cosmopolitan pests that are more or less prevalent in this country. While it is true that many of these interceptions may represent forms or strains not yet introduced and potentially dangerous, it is not believed essential to the purposes of this list to include the details of their interception. They are, however, included in brief form in this preliminary text. Following each pest name are two figures in parentheses and separated by a dash, the first indicating the number of countries from which the pest was intercepted and the second the total number of interceptions.

INSECTS

Ahasverus advena (31–130), *Aspidiotus camelliae* (8–11), *A. cyanophylli* (15–44), *A. hederae* (41–542), *A. lataniae* (23–99), *A. perniciosus* (5–16), *Aulacaspis pentagona* (11–41), *A. rosae* (2–4), *Carpocapsa pomonella* (18–72), *Carpophilus* sp. (33–111), *Cerataphis lataniae* (14–22), *Ceroplastes floridensis* (2–18), *Chionaspis citri* (15–59), *C. euonymi* (3–12), *Chrysomphalus aonidum* (44–819), *C. aurantii* (45–580), *C. dictyospermi* (36–442), *Coccus elongatus* (2–38), *C. hesperidum* (20–76), *Diaspis boisduvalii* (22–78), *D. bromeliae* (8–220), *D. echinocacti* (4–15), *D. echinocacti opuntiae* (4–8) *Ephestia* sp. (45–237), *Etiella zinckenella* (5–33), *Gnorimoschema operculella* (26–143), *Heliothis obsoleta* (6–1,822), *H. virescens* (4–158), *Heliothrips hemorrhoidalis* (3–3), *Hemichionaspis aspidistrae* (19–91), *H. minor* (16–143), *Howardia biclavis* (8–80), *Ischnaspis longirostris* (16–57), *Lepidosaphes beckii* (72–3,350), *L. gloverii* (23–375), *L. ulmi* (15–37), *Oryzaephilus surinamensis* (34–103), *Parlatoria pergandii* (49–752), *P. proteus* (7–24), *Plodia interpunctella* (27–170), *Pseudococcus adonidum* (9–54), *P. brevipes* (22–512), *P. citri* (23–53), *P. maritimus* (8–13), *P. nipae* (7–9), *Rhizoglyphus hyacinthi* (20–99), *Saissetia hemisphaerica* (20–49), *S. nigra* (7–56), *S. oleae* (15–36), *Sitophilus oryzae* (36–253), *Tribolium confusum* (10–19), *T. ferrugineum* (28–99): Total of these insects interceptions, 12,287.

DISEASES

Actinomyces scabies (45–1,019), *Alternaria* sp. (38–260), *Aspergillus niger* (55–318), *Aspergillus* sp. (41–216), *Bacillus carotovorus* (28–100), *Bacteriaceae* (56–1,088), *Bacterium tumefaciens* (14–117), *Botrytis* sp. 30–239), *Cephalothecium roseum* (23–64), *Cladosporium herbarum* (4–7), *Cladosporium* sp. (45–485), *Colletotrichum gloeosporioides* (31–410), *C. lindemuthianum* (10–30), *Coniothyrium fuckelii* (4–9), *Diaporthe phaseolorum* (2–29), *Fusarium* sp. (87–2,040), *Heterodera marioni* (20–66), *Macrosporium* sp. (33–409), oil burning (7–9), oleocellosis (17–36), *Oospora pustulans* (11–41), *Penicillium digitatum* (29–138), *P. expansum* (20–50), *P. italicum* (23–69), *Penicillium* sp. (84–1,695), petrifaction (5–48), *Phomopsis citri* (39–258), *Phytophthora infestans* (16–156), *Rhizoctonia solani* (64–712), *Rhizopus nigricans* (41–209), *Rhizopus* sp. (8–117), *Spondylocladium atrovirens* (43–615), *Spongospora subterranea* (11–30), *Venturia inaequalis* (29–234), *Verticillium cinnabarina* (24–111): Total of these disease interceptions, 11,434.

List, by countries, of pests collected and reported from July 1, 1934, to June 30, 1935, inclusive
